Summary

DevOps / Site Reliability Engineer with 3 + years of experience building, automating, and operating cloud-native infrastructure across GCP, Azure and AWS. Skilled in Kubernetes (GKE), Terraform, Infrastructure as Code (IaC), CI/CD automation, observability, incident response, and infrastructure automation. Proven track record delivering 200+ zero-downtime deployments, reducing MTTR by 60%, maintaining 99.8% uptime, and optimizing cloud costs by 35% for mission-critical enterprise systems.

Technical Skills

Cloud Platforms: Google Cloud Platform (GCP), Microsoft Azure, Amazon Web Services (AWS)
Containers & Orchestration: Kubernetes, Docker, Helm, Istio
Infrastructure as Code: Terraform, Ansible
Programming & Automation: Python, Bash, PowerShell
Monitoring & Observability: Prometheus, Grafana, Dynatrace, Google Cloud Monitoring
CI/CD & Version Control: Jenkins, Git
Security & Identity: Azure AD B2C, OAuth 2.0, PCI-DSS, SOC2
Databases: PostgreSQL, MongoDB, SQLite
Operating Systems: Linux

Experience

NCR Atleos - DevOps / Site Reliability Engineer 1 July 2023 – Present

- Managed and supported 15+ production GKE clusters across distributed cloud environments, executing 200+ zero-downtime deployments, Kubernetes upgrades, tenant onboarding, and infrastructure lifecycle operations using Jenkins, Terraform and Ansible.
- Engineered and operated centralized observability platforms using Prometheus, Grafana, Dynatrace, and Google Cloud Monitoring, establishing SLI/SLO-driven monitoring, enabling proactive alerting, reducing MTTR by 60%, and maintaining 99.8% uptime across production systems.
- Developed Python and Bash automation solutions for infrastructure provisioning, deployment validation, monitoring verification, incident remediation, and operational workflows, reducing manual operational effort by 95% and improving deployment reliability.
- Developed an automated cloud resource scheduling platform during an internal innovation initiative, reducing non-production cloud costs by 28% ($85K annually) across 100+ cloud resources through lifecycle automation and utilization optimization.
- Built and maintained scalable, highly available cloud infrastructure across GCP, Azure, and AWS environments, supporting capacity planning, reliability initiatives, and operational stability for systems serving thousands of enterprise users.
- Led platform modernization and security initiatives including Dynatrace-to-Grafana migration, Azure AD B2C identity modernization, continuous compliance monitoring, and remediation of 40+ critical vulnerabilities while maintaining PCI-DSS and SOC2 Type II compliance standards.

Projects

Service Uptime & Availability Monitoring Platform Ref: ping5

- Built an uptime monitoring platform using FastAPI, SQLite, and Docker to continuously track service availability and response latency across registered endpoints.
- Implemented automated health checks running every minute, URL registration workflows, persistent monitoring data storage, and real-time dashboard updates for operational visibility.
- Containerized the application using Docker with detailed instructions and plans for scalability, enhancements and cloud hosting.

Education

Birla Institute of Technology and Science (BITS), Pilani Bachelor of Engineering in Computer Science (Minor in Finance) July 2023
