anirudhmadhamshetty@gmail.com | +91-9390181019

DevOps & Site Reliability Engineer with 2.5+ years delivering 99.8% uptime across multi-cloud environments (GCP, Azure). Expert in Kubernetes, IaC, and observability platforms with proven success in orchestrating 200+ zero-downtime deployments, achieving 35% cost reduction, and maintaining PCI-DSS/SOC2 compliance.

## EDUCATION

### BITS PILANI

BE IN COMPUTER SCIENCE | MINOR  
IN FINANCE

Graduated July 2023 | Hyd, India

## LINKS

My Webpage: [about me](#)

Github: [ANirudhXD](#)

LinkedIn: [Anirudh Madhamshetty](#)

## COURSEWORK

### CERTIFICATIONS

Certified Kubernetes Administrator  
Microsoft Azure Fundamentals  
Monitoring with Grafana  
Devops Fundamentals

### UNDERGRADUATE

Cloud Computing • Data Structures &  
Algorithms • Database Management  
Systems • Compiler Construction

## TECHNICAL SKILLS

### Cloud & Infrastructure:

Kubernetes • GCP • Azure • Docker •  
GKE • Terraform

### Monitoring & Observability:

Grafana • Prometheus • Dynatrace •  
Google Cloud Monitoring

### DevOps & Automation:

Ansible • Jenkins • GitHub Actions •  
CI/CD • IaC

### Programming & Scripting:

Python • PowerShell • C++ • Bash

### Identity & Security:

Azure B2C • OAuth 2.0 • Key Vault •  
PCI-DSS • SOC2

### Databases & Tools:

SQL • MongoDB • Git • Linux

## EXPERIENCE

### NCR ATLEOS | DEVOPS/SITE RELIABILITY ENGINEER

July 2023 - Present | Hyd, India

- Implemented and optimized a multi-source observability platform from ground up, integrating Google Cloud Monitoring, Prometheus, and Grafana, achieving 99.8% uptime with zero SLO breaches and proactive alerting that reduced incident response time by 60%.
- Orchestrated 200+ production deployments using Infrastructure-as-Code (Terraform/Ansible) with zero downtime, implementing security patches, version upgrades, and tenant onboardings across 15+ GKE clusters and cloud environments.
- Architected and implemented an end-to-end OAuth 2.0 identity solution using Azure B2C Custom Policies, Azure Functions, and Key Vault, successfully migrating 21,000+ users in real-time with 99.9% success rate. Delivered complete lifecycle from PoC through production deployment.
- Developed 25+ automation scripts in PowerShell and Python for user management, service updates, and operational workflows, reducing manual operations time by 95% (from 4 hours to under 5 minutes per task).
- Led critical migration initiatives from Dynatrace to Grafana, Okta to Azure B2C, and Jenkins to GitHub Actions, reducing operational costs by 35% while improving deployment velocity and system observability.
- Achieved 100% compliance in PCI-DSS and SOC2 Type II audits by remediating 40+ security vulnerabilities, implementing security controls, and establishing continuous compliance monitoring processes.

### ECON SYSTEMS | RESEARCH INTERN

Jan 2023 – June 2023 | Chennai, India

- Developed and optimized a real-time image stitching algorithm using OpenCV, SIFT feature detection, and ML-based homography estimation, achieving 95% accuracy at 15 FPS for autonomous robotic navigation systems.

## PROJECTS

### CLOUD SNOOZE | HACKATHON'25 AT NCR ATLEOS

- Engineered an intelligent cloud cost optimization solution using GCP Cloud Functions, Cloud Scheduler, and log-based metrics to automatically scale down non-production infrastructure (VMs, databases, GKE clusters) during idle periods.
- Achieved 28% reduction in non-production cloud costs (\$85K+ annually), managing 100+ resources across multiple environments. Awarded 'INNOVATE MINDS' recognition with approval for company-wide deployment.
